

## 4. Project planning phase

- ✓ **Chose the Development Tool:** Decided to use **ServiceNow Studio** to build the app because it keeps all files, fields, and codes together in one safe Scoped Application.
- ✓ **Organized the Project Milestones:** Arranged the project's core requirements into a clear, trackable 5-step development plan:
  - *Milestone 1:* Create the **Catalog Item** interface for the ID card request.

The screenshot shows the 'Employee ID Card Approval Flow' configuration in ServiceNow Studio. The 'Action' is set to 'Get Catalog Variables'. Under 'Action Inputs', there are two main sections: 'Submitted Request (Requested Item)' and 'Template Catalog Items and Variable Sets (Catalog Items and Variable Sets)'. The 'Submitted Request' section has a 'Trigger' dropdown and a 'Requested Item' dropdown. The 'Template Catalog Items' section has a dropdown menu showing 'Employee ID Card Requ...'. Below this, there are two columns: 'Available' and 'Selected'. The 'Available' column lists 'request\_type' and 'reason'. The 'Selected' column lists 'employee\_name', 'department', and 'upload\_id\_photo'.

- *Milestone 2:* Build the required form fields (**Employee Name, Department, and Reason**).

The screenshot shows the 'Update Record' configuration in ServiceNow Studio. The 'Action' is set to 'Update Record'. Under 'Action Inputs', there are three main sections: 'Record', 'Table', and 'Fields'. The 'Record' section has a 'Trigger' dropdown and a 'Requested Item' dropdown. The 'Table' section has a dropdown menu showing 'Requested Item [sc\_req\_item]'. The 'Fields' section has a dropdown menu showing 'Stage' and a text field containing 'Waiting for Approval'. There is also an '+ Add field value' button and a 'Close' button at the bottom right.

- *Milestone 3:* Create the routing logic for **Manager Approval**.

The screenshot shows the 'Ask for Approval' configuration in ServiceNow Studio. The 'Action' is set to 'Ask for Approval'. Under 'Action Inputs', there are several sections: 'Record', 'Table', 'Approval Reason', 'Approval Field', 'Journal Field', 'Rules', and 'Due Date'. The 'Record' section has a 'Trigger' dropdown and a 'Requested Item' dropdown. The 'Table' section has a dropdown menu showing 'Requested Item [sc\_req\_item]'. The 'Approval Reason' section has a dropdown menu showing 'Approval Reason'. The 'Approval Field' section has a dropdown menu showing 'Approval'. The 'Journal Field' section has a dropdown menu showing 'Approval history'. The 'Rules' section has a dropdown menu showing 'Approve' and a 'When' dropdown showing 'Anyone approves'. The 'Due Date' section has a dropdown menu showing 'None'. There is also an 'Add another' button at the bottom right.

- *Milestone 4:* Set up the automated **Notification** to alert the user after approval.

The screenshot shows the 'Action Inputs' configuration for an email notification. The 'Target Record' is set to 'Trigger -> Requested Item ...'. The 'Table' is 'Requested Item [sc\_req\_item]'. The 'Include Watermark' checkbox is checked. The 'To' field is 'Trigger - Service C... -> ... -> Em...'. The 'Subject' is 'Your Employee ID Card Request is In Progress!'. The 'Body' is 'Good news! Your request for a replacement ID card has been approved. The team is currently preparing your new card.'

- *Milestone 5:* Set up the system to automatically generate a fulfillment **Task for the Admin Team** to print the card.

The screenshot shows the 'Action Inputs' configuration for a task fulfillment. The 'Record' is 'Trigger -> Requested Item ...'. The 'Table' is 'Requested Item [sc\_req\_item]'. The 'Fields' section has two rows: 'State' with a dropdown menu and 'Closed Incomplete', and 'Stage' with a dropdown menu and 'Request Cancelled'. There is a '+ Add field value' button and a 'Close' button at the bottom right.

- ✓ **Planned the Integration Strategy:** Scheduled the workspace setup so that it can be linked to GitHub for easy tracking and final project submission.
