

2.Requirement Phase

- ✓ **Defined the Form Fields (Variables):** Figured out exactly what text and choices the user needs to fill out on the form (like Employee Name, ID, Department, and Reason for Request).

The screenshot shows the 'Catalog Item' form for 'Employee ID Card Request' in ServiceNow. The form includes fields for Name, Application, Catalogs, Category, State, Checked out, and Owner. The 'Catalogs' field is set to 'Service Catalog' and the 'Category' is 'Can We Help You?'. The 'State' is 'Published' and 'Checked out' is 'false'. The 'Owner' is 'System Administrator'. The 'Application' is 'Employee ID Card Management'. The 'Active' checkbox is checked. The 'Roles' field is empty. The 'Fulfillment automation level' is 'Unspecified'. A blue banner at the top says 'Build and modify items faster with the improved Catalog Builder.'

- ✓ **Decided on Pricing Rules:** Set up the system requirements so that if an employee loses their card, a replacement fee (price) automatically shows up at checkout.
- ✓ **Mapped out Mandatory Fields:** Marked critical fields (like Employee ID) as required so a user cannot submit an incomplete form.

The screenshot shows the 'Categories' tab of the 'Catalog Item' form for 'Employee ID Card Request'. The table lists the categories assigned to the item.

- ✓ **Planned the Confirmation Pop-up:** Defined the exact details that *must* show up in the order confirmation at the top of the screen (the current Time, the total Price, and the Requirement details).

- ✓ **Established Access Controls:** Set the rule that only active employees should be able to see and submit this specific request form.
