

1.Ideation phase

- ✓ **Found the Problem:** Employees don't have a simple, digital way to ask for a new ID card, and tracking requests manually via email is messy.
- ✓ **Came up with the Idea:** Planned a digital request system where an employee can order a card, instantly see their order details (like time and price), and track it online.
- ✓ **Mapped out the Steps** Decided on paper how the order should flow:
Order Submitted → Sent for Approval → Notification Sent → Card Printed.
- ✓ **Set the Goals:** Agreed that the system must give the user immediate feedback (like an order confirmation message) and automatically alert the right teams.
- ✓ **Defined Request Types:** Decided that the system should handle three simple situations: *New Hires*, *Lost/Damaged Cards*, and *Name Changes*.
- ✓ **Planned for Security:** Agreed that only authorized managers should be able to approve a card request before it actually gets printed.
- ✓ **Designed the User Experience:** Decided the interface needs to be clean, simple, and look like a standard online shopping checkout page so anyone can use it without training.

2.Requirement Phase

- ✓ **Defined the Form Fields (Variables):** Figured out exactly what text and choices the user needs to fill out on the form (like Employee Name, ID, Department, and Reason for Request).

Fulfillment automation levelUnspecified

- ✓ **Decided on Pricing Rules:** Set up the system requirements so that if an employee loses their card, a replacement fee (price) automatically shows up at checkout.
- ✓ **Mapped out Mandatory Fields:** Marked critical fields (like Employee ID) as required so a user cannot submit an incomplete form.

- ✓ **Planned the Confirmation Pop-up:** Defined the exact details that *must* show up in the order confirmation at the top of the screen (the current Time, the total Price, and the Requirement details).

- ✓ **Established Access Controls:** Set the rule that only active employees should be able to see and submit this specific request form.

3. Project Design Phase

- ✓ **Milestone 1 (Catalog Item Interface Design):** Mocked up the visual layout of the **Employee ID Card Request** page on paper and dashboard wireframes, ensuring it fits cleanly into the Service Portal look.

The screenshot shows the 'Employee ID Card Request' form in the 'Details' tab. The left sidebar contains a navigation menu with options: Details (selected), Location, Questions, Client Script, Settings, Access, Fulfillment, and Review and submit. The main content area is titled 'Basic info' and includes a toggle for 'Item is active' (checked), a note about retiring the item, an 'Item name' field (labeled with an asterisk) containing 'Employee ID Card Request', and a 'Short description' field containing 'Request a new or replacement employee ID card.'. A 'Continue to Location' button is at the bottom right.

- ✓ **Milestone 2 (Fields Layout Design):** Planned the arrangement and order of the input fields (**Employee Name, Department, and Reason**) so the form is clean and easy for an employee to navigate.

The screenshot shows the 'Employee ID Card Request' form in the 'Questions' tab. The left sidebar is the same as in the previous image. The main content area is titled 'Define the questions on your item form' and includes an 'Expand all' link and an 'Insert new question' button. The form contains five fields: 'Employee Name' (Text - Single-line), 'Department' (Choice - Dropdown (fixed values)), 'request type' (Choice - Dropdown (fixed values)), 'Reason' (Text - Multi-line), and 'upload ID photo' (Attachment). A 'Continue to Client Script' button is at the bottom right.

- ✓ **Milestone 3 (Approval Architecture Design):** Drew out the logical diagram for the **Manager Approval** loop, establishing exactly who gets notified and what happens if a request is approved or rejected.

4. Project planning phase

- ✓ **Chose the Development Tool:** Decided to use **ServiceNow Studio** to build the app because it keeps all files, fields, and codes together in one safe Scoped Application.
- ✓ **Organized the Project Milestones:** Arranged the project's core requirements into a clear, trackable 5-step development plan:
 - *Milestone 1:* Create the **Catalog Item** interface for the ID card request.

The screenshot shows the 'Employee ID Card Approval Flow' configuration in ServiceNow Studio. The 'Action' is set to 'Get Catalog Variables'. Under 'Action Inputs', there are two main sections: 'Submitted Request (Requested Item)' and 'Template Catalog Items and Variable Sets (Catalog Items and Variable Sets)'. The 'Submitted Request' section has a 'Trigger' dropdown and a 'Requested Item' dropdown. The 'Template Catalog Items' section has a dropdown for 'Employee ID Card Requ...'. Below this, there are two columns: 'Available' and 'Selected'. The 'Available' column lists 'request_type' and 'reason'. The 'Selected' column lists 'employee_name', 'department', and 'upload_id_photo'.

- *Milestone 2:* Build the required form fields (**Employee Name, Department, and Reason**).

The screenshot shows the 'Update Record' configuration in ServiceNow Studio. The 'Action' is set to 'Update Record'. Under 'Action Inputs', there are three main sections: 'Record', 'Table', and 'Fields'. The 'Record' section has a 'Trigger' dropdown and a 'Requested Item' dropdown. The 'Table' section has a dropdown for 'Requested Item [sc_req_item]'. The 'Fields' section has a dropdown for 'Stage' and a text field for 'Waiting for Approval'. There is also an 'Add field value' button and a 'Close' button.

- *Milestone 3:* Create the routing logic for **Manager Approval**.

The screenshot shows the 'Ask for Approval' configuration in ServiceNow Studio. The 'Action' is set to 'Ask for Approval'. Under 'Action Inputs', there are several sections: 'Record', 'Table', 'Approval Reason', 'Approval Field', 'Journal Field', 'Rules', and 'Due Date'. The 'Record' section has a 'Trigger' dropdown and a 'Requested Item' dropdown. The 'Table' section has a dropdown for 'Requested Item [sc_req_item]'. The 'Approval Reason' section has a dropdown for 'Approval Reason'. The 'Approval Field' section has a dropdown for 'Approval'. The 'Journal Field' section has a dropdown for 'Approval history'. The 'Rules' section has a dropdown for 'Approve' and a 'When' dropdown for 'Anyone approves'. The 'Due Date' section has a dropdown for 'None'. There is also an 'Add another' button.

- *Milestone 4:* Set up the automated **Notification** to alert the user after approval.

The screenshot shows the 'Action Inputs' configuration for an automated notification. The 'Target Record' is set to 'Trigger -> Requested Item ...'. The 'Table' is 'Requested Item [sc_req_item]'. The 'Include Watermark' checkbox is checked. The 'To' field is 'Trigger - Service C... -> ... -> Em...'. The 'Subject' is 'Your Employee ID Card Request is In Progress!'. The 'Body' is 'Good news! Your request for a replacement ID card has been approved. The team is currently preparing your new card.'

- *Milestone 5:* Set up the system to automatically generate a fulfillment **Task for the Admin Team** to print the card.

The screenshot shows the 'Action Inputs' configuration for an automated task. The 'Record' is 'Trigger -> Requested Item ...'. The 'Table' is 'Requested Item [sc_req_item]'. The 'Fields' section has two rows: 'State' with a dropdown menu and 'Closed Incomplete', and 'Stage' with a dropdown menu and 'Request Cancelled'. There is a '+ Add field value' button and a 'Close' button.

- ✓ **Planned the Integration Strategy:** Scheduled the workspace setup so that it can be linked to GitHub for easy tracking and final project submission.

5. Project Development Phase

- ✓ **Milestone 1 (Create a Catalog Item):** Opened ServiceNow Studio and created a brand-new digital form item named **Employee ID Card Request** inside the Service Catalog.
- ✓ **Milestone 2 (Add Fields):** Built and configured the three required input variables on the form: **Employee Name**, **Department**, and **Reason** (New or Replacement).
- ✓ **Milestone 3 (Route for Manager Approval):** Designed a backend workflow that automatically catches the submission and pauses it to ask for **Manager Approval** before anything else happens.
- ✓ **Milestone 4 (Send a Notification after Approval):** Created a custom script that instantly slides down an email-style **Order Confirmation Banner** at the top of the portal screen, dynamically showing the customer their exact request details, time, and price.
- ✓ **Milestone 4 Extended (System Notifications):** Configured automated platform notification triggers to alert the employee via email regarding whether their request was officially approved or denied.
- ✓ **Milestone 5 (Create a Task for Admin Team):** Added a fulfillment step to the workflow that auto-generates a **Catalog Task (SCTASK)** for the Admin Team to print and issue the physical ID card only *after* the manager approves it.

6. Project Documentation

○ Core Steps

Step 1: Built the Portal Interface

Created a digital self-service form named **Employee ID Card Request** with three mandatory fields: *Employee Name*, *Department*, and *Reason* (New/Replacement).

Step 2: Configured the Automated Workflow

Designed a backend automation rule in ServiceNow that catches the form submission and immediately holds it for **Manager Approval**.

Step 3: Programmed Real-Time Notifications

Wrote a custom JavaScript script (Business Rule) that triggers immediately at checkout to drop down an email-style **Order Confirmation Banner** containing the execution time and price summary.

Step 4: Automated Task Handoff

Set up the workflow to instantly auto-generate a printing and distribution ticket (**Catalog Task**) for the **Admin Team** the moment the manager hits approve.

Final Project Output

The final deliverable is a fully working, secure **ServiceNow Scoped Application** that accomplishes the following:

1. **For Employees:** A clean, foolproof portal form where they can order an ID card and receive an **instant visual order confirmation message** at checkout.
2. **For Managers:** An automated system that routes requests directly to their approval queue, removing the need for tracking via manual emails.
3. **For Admins:** A zero-touch task assignment process that auto-generates printing tickets only for verified, fully authorized reques
